

Optessa Inc. is a leader in intelligent scheduling, sequencing and planning optimization software with successful implementations of its products in the top tier global manufacturers. The scheduling process can directly influence the cost and time required to deliver an order and an effective scheduling system provides a competitive advantage to a manufacturer.

Companies using Optessa products have made significant reductions in manufacturing costs while enabling lean and flexible operations without adding resources. Optessa has demonstrated significant operational and strategic benefits in some of the largest and most complex plants, such as:

Optessa products have wide applicability in industries as diverse as auto OEMs, suppliers, power equipment, appliances, electronics, semiconductor, textiles and batch process industries such as food and beverage and paints.

The company has developed a well-defined customer driven process called OIS (Optimal Intelligent Scheduling).

Optessa uses modern optimization techniques based on proprietary algorithms and extensive internal and customer specific domain knowledge which is used to configure the products to the specific business and operating environment of our customer. Optessa's solutions and capabilities allow the customer to move to the next higher level of competitive performance.

The Optessa products suite includes:

- **Optessa MLS:** multi-line sequencing and scheduling system
- **Optessa MLS-RTS:** on-demand / real-time scheduling system
- **Optessa MLP:** multi-plant planning system

The products offer deployment flexibility and can be installed at the level of a single line or area in a plant, for an entire plant's operations and at a corporate or regional level for multiple plants.

The company has offices in Edmonton, Alberta, Canada, and Red Bank, New Jersey, USA.
